We are expert in pre-employment health checkup

HumaCare Pathlabs is a leading provider of specialized medical and pre-medical diagnostic services, catering to both national and international companies with a strong focus on pre-employment health checkups. Our expertise lies in offering a comprehensive range of tests and assessments that are essential for evaluating the overall health and fitness of potential employees before they join the workforce.

We understand the critical importance of ensuring that candidates meet the necessary health standards required for various industries, whether it's in manufacturing, healthcare, IT, or other sectors. Our state-of-the-art diagnostic facilities are equipped with advanced technology to perform a wide array of medical tests, including but not limited to blood tests, X-rays, ECGs, pulmonary function tests (PFTs), and audiometry. With a strong commitment to maintaining international quality standards, HumaCare Pathlabs is certified by UKASCB, UROPACERT, and ISO/IEC 17025:2017, and is in the process of acquiring NABL and CMC Vellore certifications. This ensures that our diagnostic services adhere to the highest levels of accuracy and reliability. Our experienced team of medical professionals ensures that each test is conducted with precision, and results are delivered promptly, enabling employers to make informed decisions regarding the health and safety of their future employees.

At HumaCare Pathlabs, we are proud to serve businesses across a variety of sectors, providing them with the critical health data needed to create a safe and healthy work environment. Whether it's for local companies or multinational corporations, our pre-employment health screening services are designed to meet the diverse needs of businesses in today's globalized workforce.

Home Collection Service

ECG

(Electrocardiogram)

An electrocardiogram is a picture of the electrical conduction of the heart processes.

PFT

(Pulmonary Function Test)

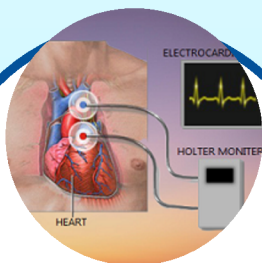

Pulmonary function test (PFT) is a term used for a number of tests that identify your lung function

EEG

(Electroencephalogram)

An EEG can determine changes in brain activity that might be useful in diagnosing brain disorders

HOTER TEST

A holter monitor is a device that records your heart beats. It contains electrodes, wires and a small machine that attaches to your waistband.

NCV

(Nerve conduction velocity)

Nerve conduction velocity (NCV) is a test to see how fast electrical signals move through a nerve.

ABPM

ambulatory blood pressure monitoring

ABPM is when your blood pressure is being measured as you move around, living your normal daily life.

EMG

(Electromyography)

measures muscle response or electrical activity in response to a nerve's stimulation of your muscle.

SLEEP STUDY

A sleep study or polysomnogram (PSG) is a test that electronically transmits and records specific physical activities while you sleep.

Digital X-Ray

All types of x-rays can be done at your door step with the help of portable DR System (Digital Radiography System) Machine at any time.
